### ***Expert Report: "TPD Site Suitable for Nuclear Power"***

**SALT LAKE CITY, UT** –Transition Power Development (TPD) has just received a very encouraging initial site evaluation report from the highly experienced nuclear power site assessment firm McCallum-Turner (MT). This report summarizes MT's review of TPD's preferred site for new nuclear power deployment project near Green River city, Utah.

"We have several sites under consideration. Each sites physical attributes have been assessed internally through a site selection process. The Green River site has slowly risen to a preferred site. This third party evaluation indicates that our initial internal assessments were on target" said Tom Retson TPD's President.

The MT team evaluated the following specific issues for the TPD Blue Castle site:

- Flooding potential
- Water availability
- Nearby hazardous land uses
- Geology/seismology

The report concluded that the site appears to be suitable for commercial nuclear power plants with site-related characteristics similar to those for which nuclear plant vendors have obtained or are in the process of obtaining Design Certifications from NRC.

#### **About Transition Power Development**

Transition Power Development (TPD) is a limited liability company serving the electric power generation industry by identifying and developing new nuclear plant sites in the western US. The TPD business mission is to select, acquire, enhance, and license plant sites which are very well suited for the deployment of new nuclear power generation. TPD owns or controls the principal assets of its projects. More information about Transition Power Development can be found at [www.transitionpowerdevelopment.com](http://www.transitionpowerdevelopment.com)
